

Persuade me with pieces - North Pole Explorers!

You will need:

- A pile of mixed bricks and other pieces
- Paper and pens

How to play:

Here is the dilemma:

A group of explorers have arrived at the North Pole and need a suitable design for the shelters they want to construct. The shelters should not only protect them from the freezing temperatures but should also be able to be packed up and transported quickly if needed. They will need a feature to keep the explorers safe from visits by inquisitive wildlife.

- Think about ways to protect the explorers.
- Design and build a solution. Can you add some features that will solve their problem with the cold conditions and curious creatures?
- Present it to family or friends and convince them you have made the ultimate build to solve the problem!
